Experiment -4.1

AIM: To create an MFA code For Root User

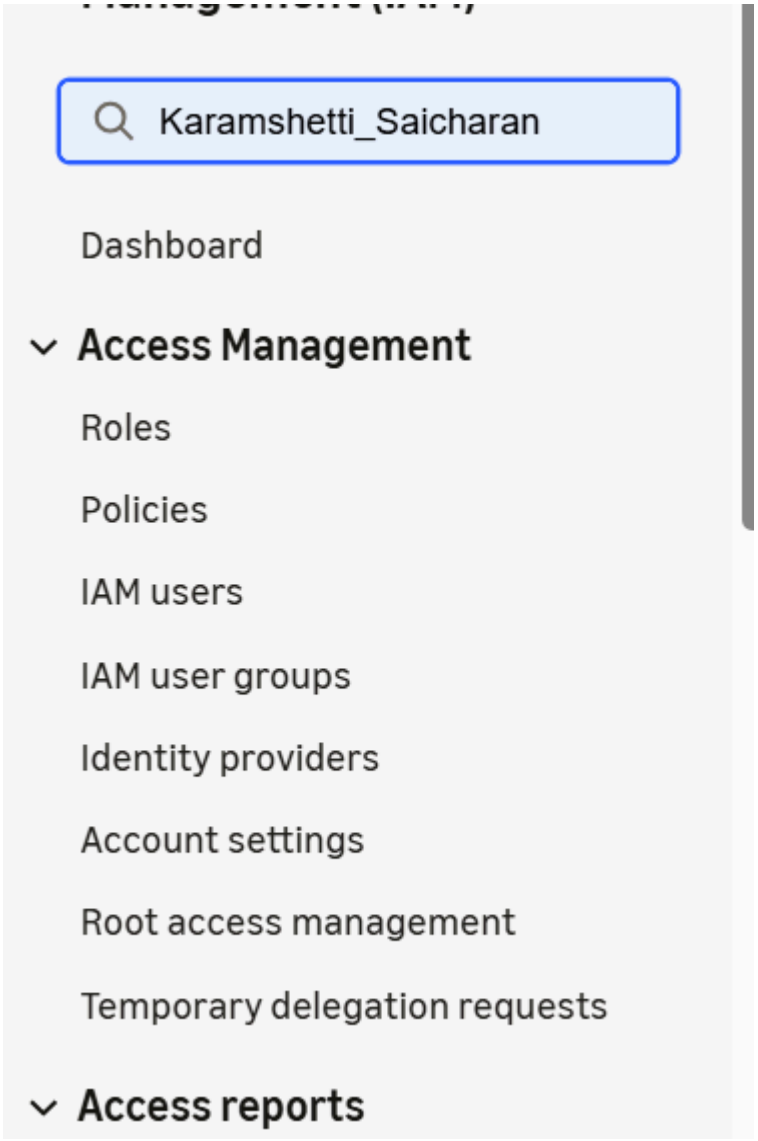

Description:

Configured Multi-Factor Authentication (MFA) for the AWS Root User account to enhance account security. MFA adds an additional layer of protection by requiring a verification code from an authenticator application or hardware device in addition to the account password, helping prevent unauthorized access to critical account settings and billing information.

Steps:

1. Sign in to the AWS Management Console using root mail id.
2. In the navigation bar click security credentials.
3. Go for multi factor authentication.
4. Click assign MFA - key.
5. Enter any Device name.
6. Select Authenticator App -> click Next.
7. Before selecting an app, we need to install the Authenticator app on our phone.
8. After selecting the app -> click next.
9. Click show QR code.
10. On our phone, open the authenticator app → Add code → select scan QR code → scan the code on the screen.
11. Enter the 6 - digit code type it on the screen. Wait for 30 seconds to enter a new mfa key.
12. Then Click add MFA.
13. Now in the root user when we try to sign in it will ask the mfa code .

Multi-factor authentication (MFA) (1)

Remove | Resync | Assign MFA device

Use MFA to increase the security of your AWS environment. Signing in with MFA requires an authentication code from an MFA device. Each user can have a maximum of 8 MFA devices assigned. Learn more
