AIM: To create an MFA code For IAM User

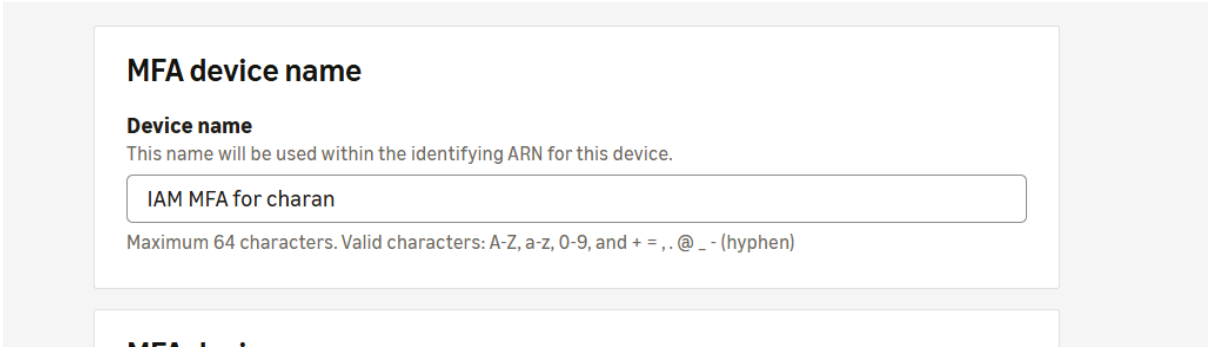

Description:

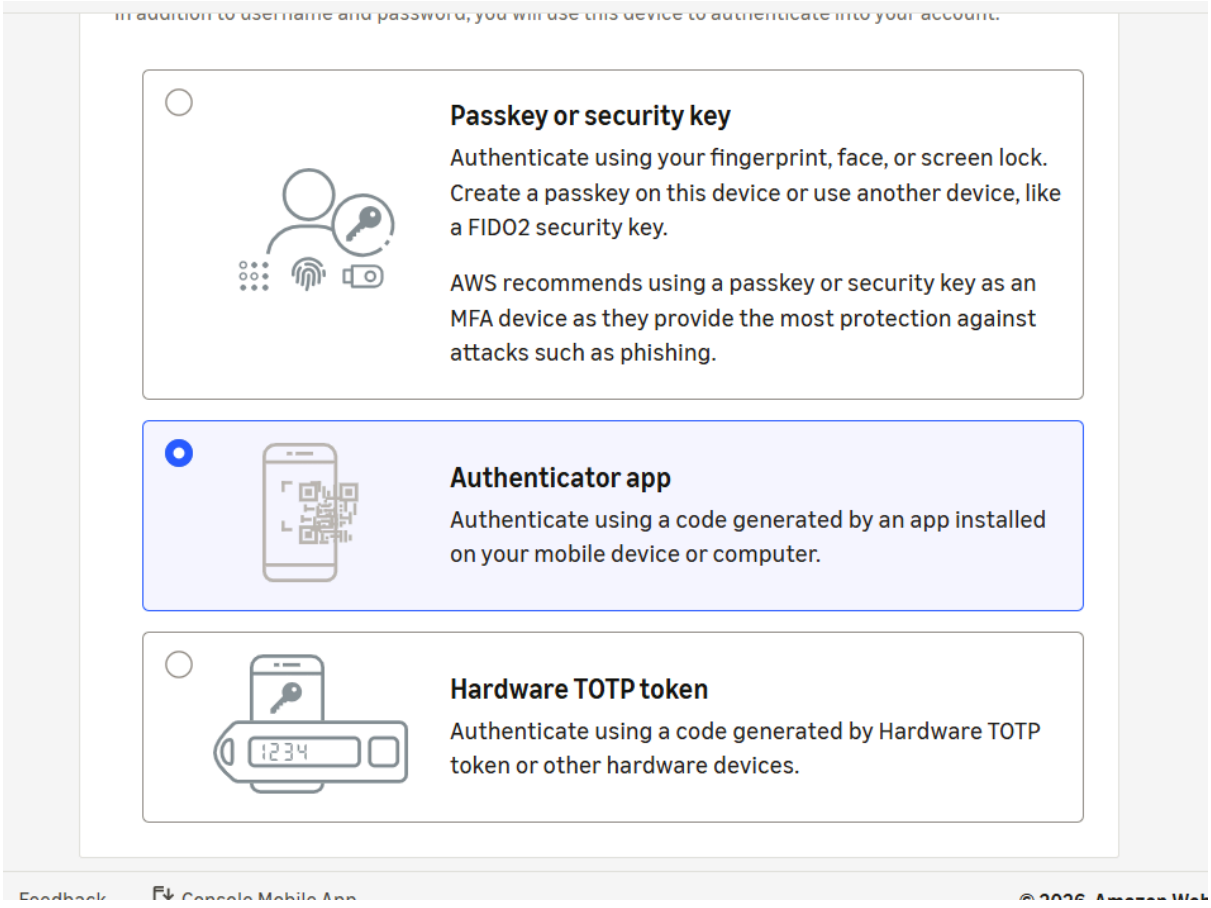

Enabled Multi-Factor Authentication (MFA) for an AWS IAM user to strengthen access security. MFA requires the user to provide a one-time verification code from an authenticator application or security device along with their password, reducing the risk of unauthorized access to AWS resources and services.

Steps:

1. Sign in to the AWS Management Console using IAM user and go to IAM console.
2. In the navigation bar click security credentials.
3. Go for multi factor authentication.
4. Click assign MFA - key.
5. Enter any Device name.
6. Select Authenticator App -> click Next.
7. Before selecting an app, we need to install the Authenticator app on our phone.
8. After selecting the app -> click next.
9. Click show QR code.
10. On our phone, open the authenticator app → Add code → select scan QR code → scan the code on the screen.
11. Enter the 6 - digit code type it on the screen. Wait for 30 seconds to enter a new mfa key.
12. Then Click add MFA.
13. Now try signing using IAM user .

Output:

MFA device name
Device name
This name will be used within the identifying ARN for this device.
IAM MFA for charan
Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)

Passkey or security key
Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.
AWS recommends using a passkey or security key as an MFA device as they provide the most protection against attacks such as phishing.
Authenticator app
Authenticate using a code generated by an app installed on your mobile device or computer.
Hardware TOTP token
Authenticate using a code generated by Hardware TOTP token or other hardware devices.
